

Rechtspraak AI — Claude API Setup Guide

How to create an Anthropic Claude API key and connect it in app settings

This guide walks you through creating a Claude API key on the Anthropic Claude Console (<https://platform.claude.com/>), funding your account, choosing a model ID, and entering both the API key and model in Rechtspraak AI settings.

What you need

- A web browser and access to <https://platform.claude.com/>
- An Anthropic Claude Console account
- A payment method to purchase API credits
- Access to the Rechtspraak AI application

Overview

1. Steps 1–5 — Sign in and create a Claude API key
2. Steps 6–7 — Add billing credits
3. Steps 8–9 — Choose a model and copy its model ID
4. Steps 10–11 — Configure Claude in Rechtspraak AI Settings

Security: Treat your API key like a password. Anyone with the key can use your paid Claude credits. If a key is exposed, revoke it in the Claude Console and create a new one.

Step 1: Open the Claude Console and sign in

Go to <https://platform.claude.com/> in your browser. On the Claude Console sign-in page, continue with Google or enter your email and select **Continue with email**. Complete any verification prompts until you reach the Console dashboard.

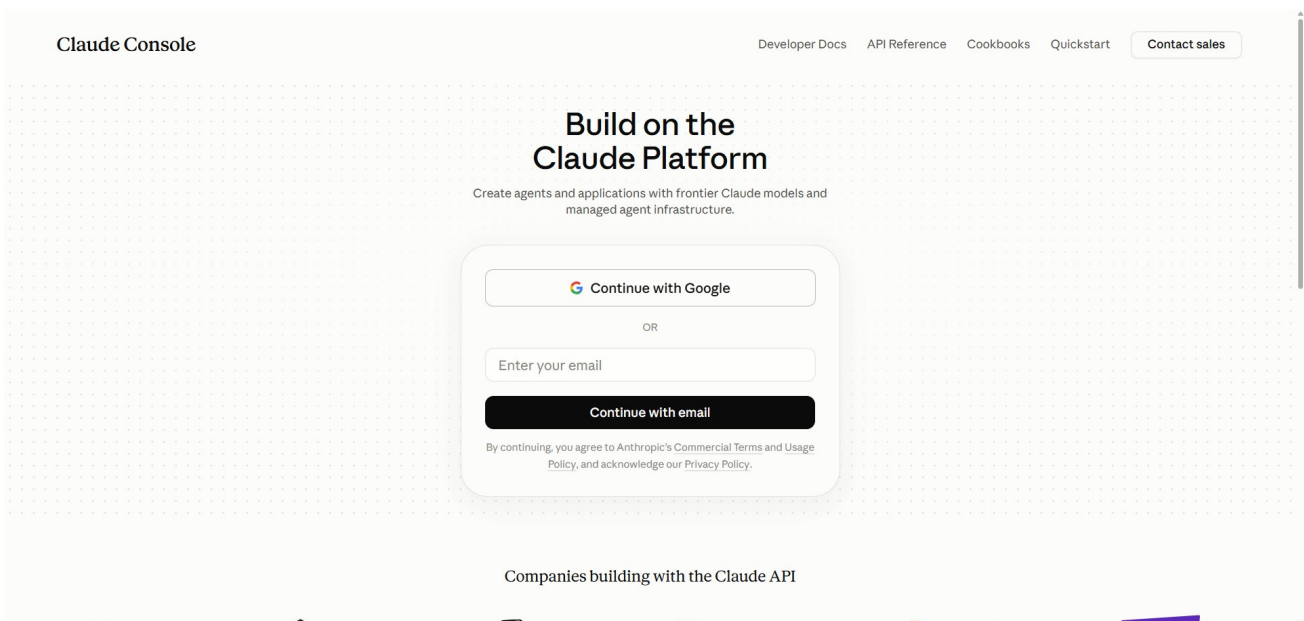

Figure 1. Open the Claude Console and sign in

Tips

- Use the Anthropic account you want linked to API billing.
- Accept Anthropic's Commercial Terms and Usage Policy if prompted.

Step 2: Open API keys from the sidebar

After you land on the dashboard, look at the left sidebar. Select **API keys** (key icon) under the main navigation. You can also use **Get API key** in the top-right if available.

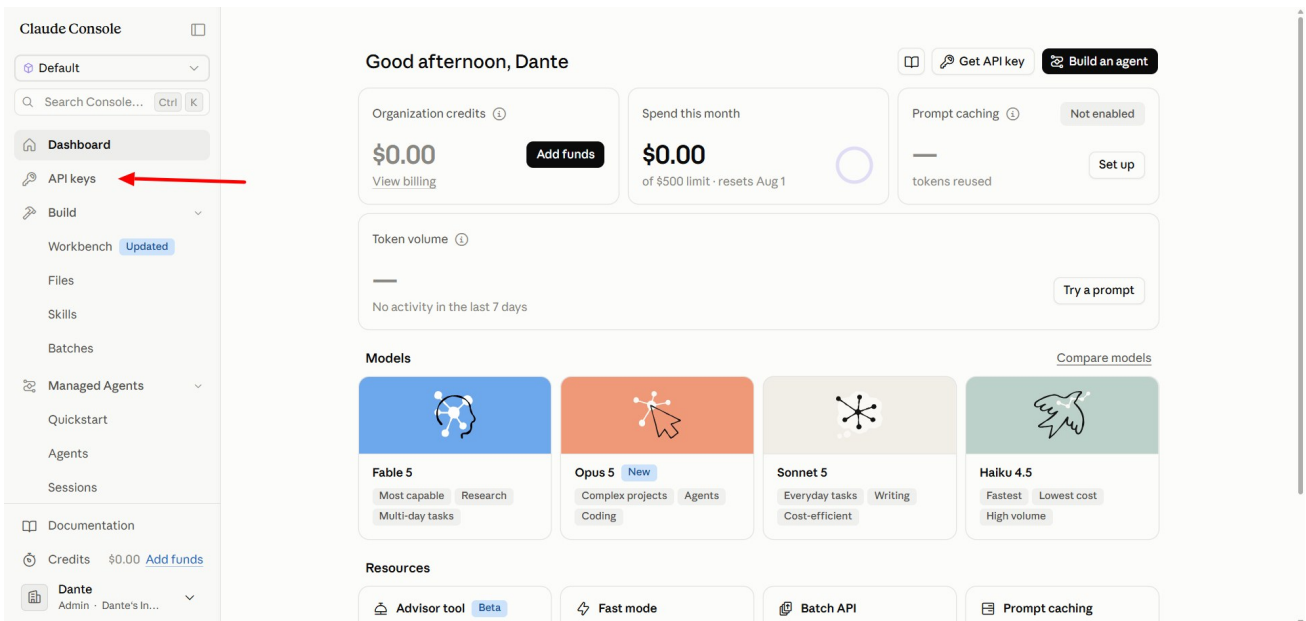

Figure 2. Open API keys from the sidebar

Tip: Confirm you are in the correct workspace (for example, Default) at the top of the sidebar.

Step 3: Start creating a new API key

On the API keys page, select **+ Create key** in the top-right corner. If you have no keys yet, the empty state also explains that you need a key to integrate with the Claude API.

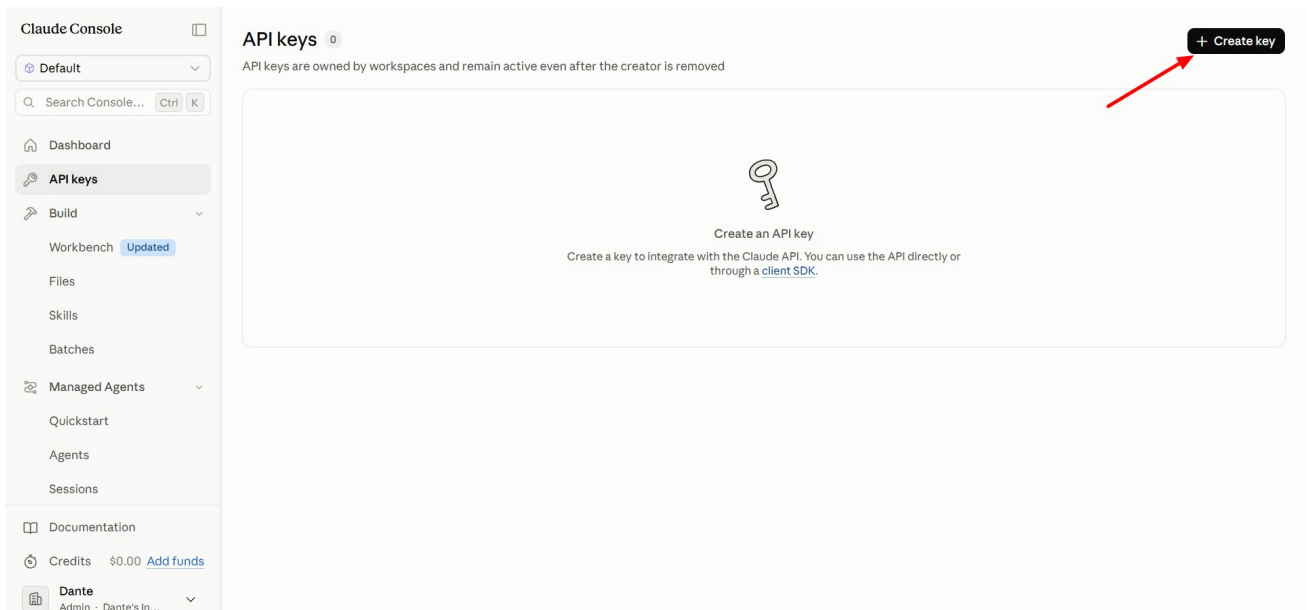

Figure 3. Start creating a new API key

Step 4: Name the key and set expiry

In the **Create API key** dialog:

1. Confirm the correct Workspace (for example, Default).
2. Enter a clear Name such as my-api-key or rechtspraak-ai.
3. Set Expires as needed (Never is common for personal tools; shorter expiry is safer for shared environments).
4. Select Add to create the key.

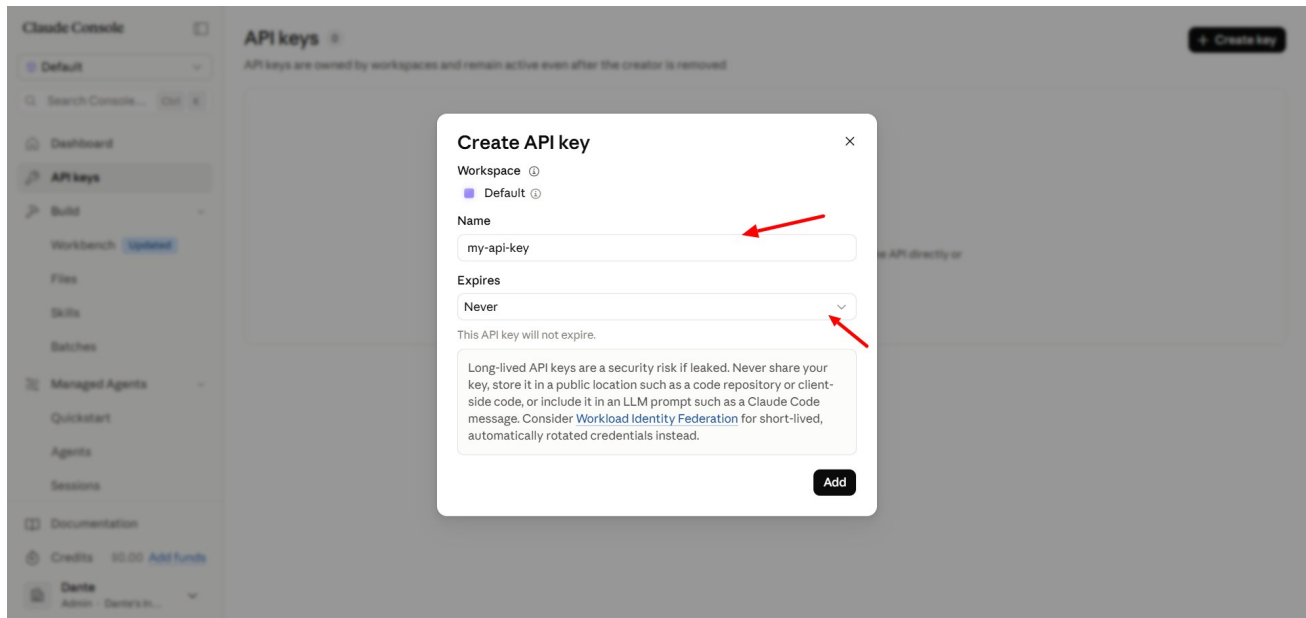

Figure 4. Name the key and set expiry

Tip: Never share long-lived keys in public repos, client-side code, or chat messages.

Step 5: Copy and store your API key securely

A **Save your API key** dialog appears with the full key value. Select **Copy key** and store it in a password manager or another secure place. Then select **Done**.

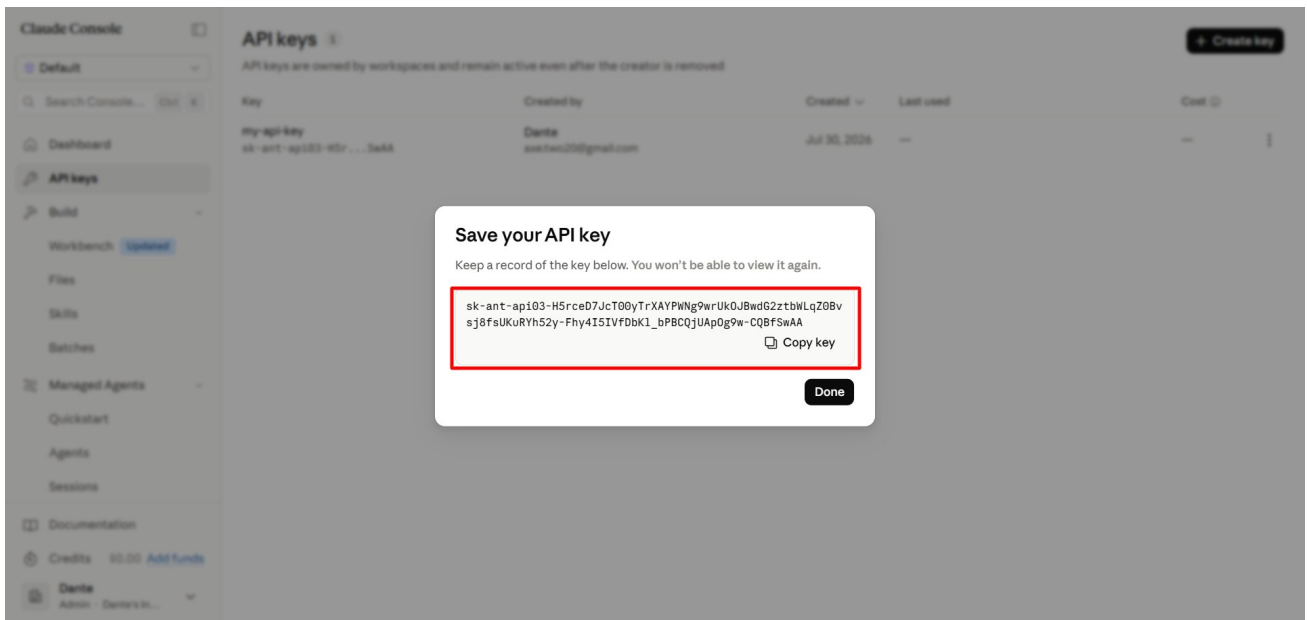

Figure 5. Copy and store your API key securely

Tips

- Anthropic shows the full key only once. If you lose it, create a new key and revoke the old one.
- Your key typically starts with sk-ant-...
- Do not paste your key into emails, tickets, or public documents.

Step 6: Add credits so the API can run

API usage requires organization credits. In the left sidebar, find **Credits** and select **Add funds**.

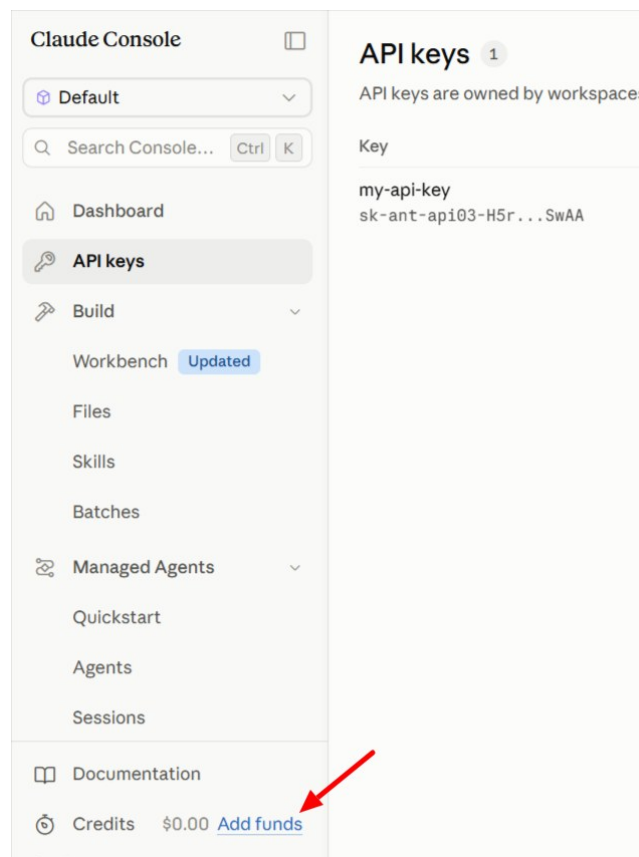

Figure 6. Add credits so the API can run

Tip: A \$0.00 balance means requests will fail until you purchase credits.

Step 7: Complete billing and buy credits

In the **Start building with Claude** checkout dialog:

1. Choose a credit amount (\$5, \$20 recommended, \$100, or Other).
2. Enter your billing address and credit card details.
3. Review usage credits, estimated tax, and total due.
4. Select Buy ... of credits to complete the purchase.

☒ My shipping address is the same as my billing address
This information is used for tax purposes.

Usage credits	\$20.00
Estimated tax	\$1.78
Total due	\$21.78

Buy \$20 of credits

Credits are consumed with API, Claude Code, and Workbench usage, and expire 1 year after purchase. By clicking "Buy credits" you agree to [Anthropic's Credit Terms](#)

Figure 7. Complete billing and buy credits

Tip: Credits are consumed by API (and related) usage and may expire per Anthropic's credit terms.

Step 8: Find available Claude models on the Dashboard

Return to **Dashboard** in the left sidebar. Scroll to the **Models** section. Here you can review current Claude models (for example Fable 5, Opus 5, Sonnet 5, Haiku 4.5) and open a model card for details.

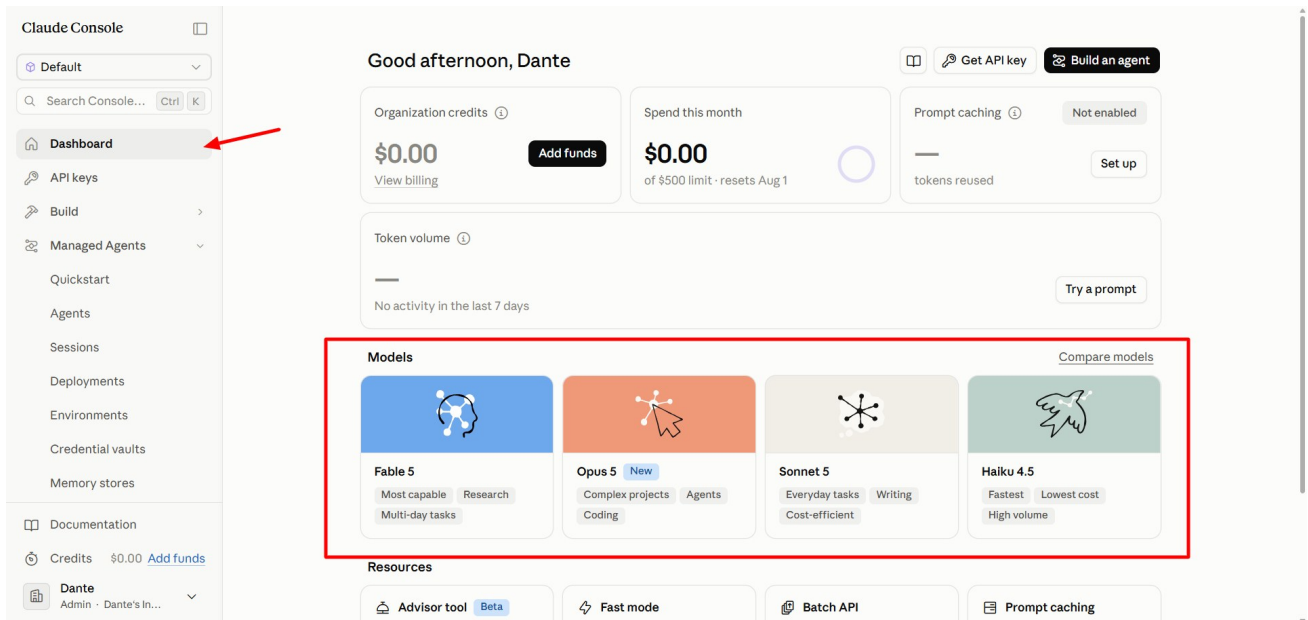

Figure 8. Find available Claude models on the Dashboard

Tips

- Pick a model that balances quality, speed, and cost for legal research in Rechtspraak AI.
- Haiku is usually fastest and lowest cost; Sonnet/Opus-class models are stronger for complex reasoning.

Step 9: Copy the exact model ID

Open the model you want to use. On the model details card, copy the model ID (the pill under the model name, for example **claude-haiku-4-5-20251001**). Use the copy control next to the ID so you paste the exact string into Rechtspraak AI.

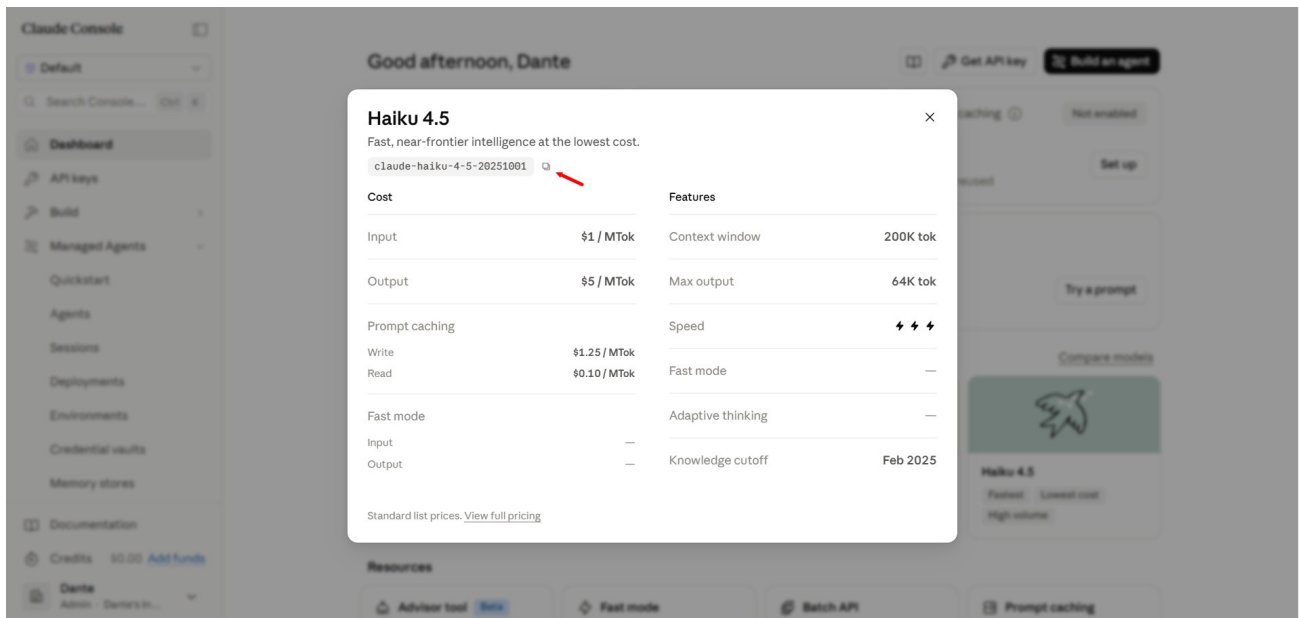

Figure 9. Copy the exact model ID

Tips

- Model IDs change over time. Always copy the ID shown in your Console rather than guessing.
- You will paste this value into the Model field in Rechtspraak AI settings.

Step 10: Open Settings in Rechtspraak AI

Open the **Rechtspraak AI** app (Dutch Legal Research Assistant). In the top-right corner, select the gear icon labeled **Settings**.

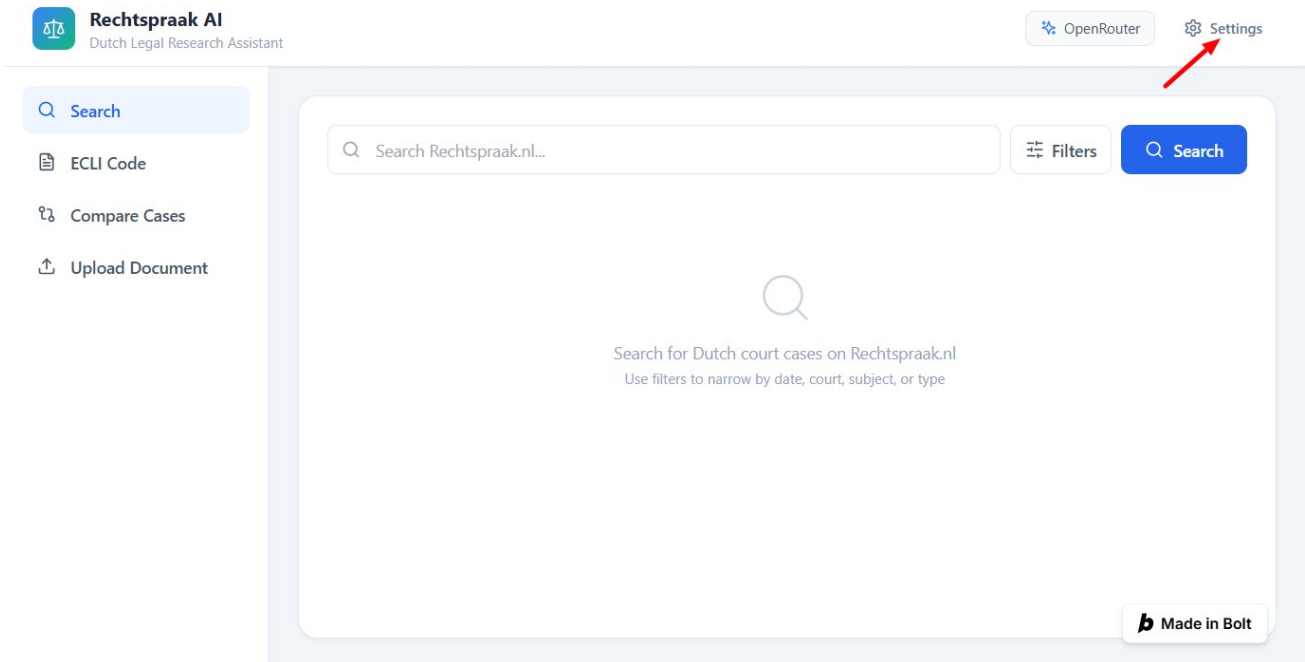

Figure 10. Open Settings in Rechtspraak AI

Step 11: Enter your Claude API key and model, then save

On the settings screen:

1. Under Select AI Provider, choose Claude API (Anthropic).
2. In API Key, paste the key you copied from the Claude Console (sk-ant-...).
3. In Model, paste the model ID you copied (for example claude-sonnet-4-20250514 or the Haiku ID from Step 9).
4. Select Save Settings.

Figure 11. Enter your Claude API key and model, then save

Tips

- Rechtspraak AI stores the key locally in your browser and does not send it to app servers.
- You can enter any valid model ID or pick from suggestions when available.
- Use Reset to Defaults only if you want to clear your custom configuration.

Quick checklist

- Signed in at <https://platform.claude.com/>
- Created and securely stored an API key (sk-ant-...)
- Added credits so the balance is greater than \$0.00
- Copied the exact model ID from the Dashboard model card
- In Rechtspraak AI → Settings, selected Claude API
- Pasted API key and model ID, then saved settings

Troubleshooting

- API errors after setup — Confirm credits are funded and the key was copied in full with no extra spaces.
- Invalid model — Re-copy the model ID from the Console model card; IDs are case-sensitive and versioned.
- Lost API key — Create a new key in Claude Console → API keys; you cannot recover the previous secret.
- Wrong provider in the app — In Settings, ensure Claude API is selected, not OpenRouter.

Note: Model names and Console UI labels can change as Anthropic updates the platform. If a screen looks slightly different, follow the same path: API keys → create key → add funds → Dashboard models → Rechtspraak AI Settings.
